Portfolio: live AI agents & data platforms (clinical trial matching, semantic search, LLM decision systems).

SUMMARY

Technical Product Leader with 10+ years building and operating enterprise SaaS, AI, data, and integration platforms in regulated environments. Leads product strategy and end-to-end delivery across AI systems, APIs, enterprise applications, data infrastructure, and workflow automation, translating complex user and business requirements into scalable products. Combines hands-on technical depth in Python, SQL, REST APIs, and agentic AI with extensive experience in stakeholder engagement, vendor management, cross-functional delivery, UAT, and enterprise launches.

EXPERIENCE

Product Manager – Enterprise Platforms & Data Integrations

Memorial Sloan Kettering Cancer Center, New York, NY — 2022–2025

- Owned the end-to-end integration lifecycle across Oracle source systems, Palantir Foundry, enterprise LIMS, and Databricks, translating clinical, laboratory, and operational requirements into prioritized workstreams and coordinating development, testing, rollout, issue resolution, and ongoing production quality.
- Mapped and validated Epic-sourced HL7 feeds carrying patient, demographic, diagnosis, and clinical accession data through Oracle and Palantir Foundry to the enterprise LIMS for biobank processing.
- Defined the biospecimen data model and operational workflows for the enterprise LIMS by analyzing schemas and processes across multiple laboratories, mapping heterogeneous legacy data into a standardized patient–consent–accession–specimen–aliquot model and designing UI/workflows supporting specimen processing, storage, and retrieval.
- Built an enterprise data model and ontology in Palantir Foundry, normalizing data across clinical, research, and biospecimen sources and delivering API-driven LIMS integrations with scheduled synchronization and real-time retrieval for time-sensitive workflows.
- Established initial-load and ongoing concordance testing in Palantir to validate data integrity across integrated systems, identify discrepancies, support root-cause analysis and issue resolution, and confirm ongoing production quality.
- Led user workshops with laboratory and operational teams to identify pain points, define requirements, and guide development and iteration of the LIMS UI and operational workflows through user feedback, UAT, and production rollout.
- Managed the enterprise SaaS LIMS vendor lifecycle from RFP and selection through implementation and rollout, coordinating requirements, integration dependencies, delivery quality, UAT, issue resolution, and operational readiness across vendor and MSK teams.
- Built and deployed AI capabilities in Python, including a GPT-powered clinical trial eligibility agent and semantic search across enterprise research data, applying LLM-based reasoning, human-in-the-loop decision support, and semantic retrieval to improve clinical trial screening and reduce biospecimen discovery from weeks to hours.

Head of Technology & Product Management

Euromoney Institutional Investor, New York, NY — 2012–2019

- Led technology and product transformation of a \$100M global financial research and events business, replacing siloed legacy systems with integrated web, mobile, CRM, and data-driven platforms serving institutional clients across the U.S., Europe, Africa, Asia, and Australia.
- Built and scaled a Salesforce-based client lifecycle platform following multi-month discovery workshops across Sales, Client Service, Finance, Investor Relations, and executive teams, migrating customer and activity data from legacy CRM systems and redesigning workflows spanning client management, communications, contracting, renewals, and billing.
- Standardized contracting across 15+ event categories by defining a common event-member contract, mapping business and data requirements with event owners, and integrating Salesforce with DocuSign and NetSuite APIs to automate contract delivery and quote-to-cash workflows.
- Developed ManagerMatch, a private online marketplace connecting institutional investors with asset managers across asset classes, supporting more than \$30B in investment manager searches.
- Launched a mobile event platform across a global portfolio of approximately 100 annual events, replacing printed materials and third-party polling services to save \$2M+ annually while introducing digital event marketing, attendee engagement, and client networking capabilities.
- Integrated Pardot marketing automation and Qualtrics with Salesforce and custom event-management applications, enabling event marketing, attendee registration, prospect/member surveys, and customer feedback workflows across the client lifecycle.
- Led a 10–15 person internal and external product/engineering organization, managing technology investment and resource allocation while introducing Agile/Scrum, Jira, CI/CD, and modern delivery practices across distributed teams.

Earlier Experience:

- Founder / Product Manager / Developer, Web Mâché (self-service SaaS website builder for publishing & commerce)
- Co-Founder / Product Manager, I Stand For (SaaS platform, acquired by political strategy group)
- Senior Application Developer, SixDegrees.com (early social network; acquired for \$125M)

Technical Skills: Python, SQL, REST APIs, API Integrations, Data Modeling, Data Pipelines, Palantir Foundry (Ontology, Pipelines), GPT/LLM & Agentic Systems, Semantic Search, TypeScript/React, Salesforce

Certifications: Salesforce Administrator, Developer, App Builder, SAFe Agile, MIT Blockchain

Education: University of Michigan -- B.A.; Columbia University -- Technology & Applications
